PARKING STRUCTURE SWEEPING

The sweeper pictured is “in motion”. See the dust down by the rear tire? The floor could be twice as dirty and that’s still all you would get. Except when using the gutter broom, these sweepers are virtually dust free.

The rough non-skid floors and ramps typical of parking structures are easily swept by our sweepers.

Other trades appreciate a clean job site. A few well timed sweeps during construction, tells everyone you run a quality site. Don’t wait for just the final clean up.

Sweeping Width:	50 in. (66 in. when gutterbrooming edges)
Power Source:	53.7HP Propane engine
Dust control:	172 sq. ft. panel filters
Panel efficiency:	filters down to 1 Micron in size
